Course Description Form

1.	Course Name:	Numerical	Analysis II
1.	course manne.	Numericai	Analysis II

2. Course Code: CE 3201

3. Semester / Year: 2st / 2023-2024

4. Description Preparation Date: 13/3/2024

5. Available Attendance Forms: Attending lectures in the department's classrooms.

6. Number of Credit Hours (Total) / Number of Units (Total): 30Hours/ 2 Units

7. Course administrator's name (mention all, if more than one name) Name: Assist. Prof. Yousra Abd Mohammed Email: Yousra.a.mohammed@uotechnology.edu.iq

8. Course Objectives

Course Objectives	 To study the principles of Numerical Analysis and its applications. Teaching students how to use programming to solve complicated problems. Gain knowledge about how to solve Ordinary Differential Equations, interpolation, and curve fitting problems by attrition.

9. Teaching and Learning Strategies

Strategy Theoretical lectures using PPT & PDF, and Video lectures. The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple tutorial involving some sampling activities that are interesting to the students.

10. Course Structure

Week	Hours	Required	Unit or subject	Learning	Evaluation method
		Learning	name	method	
		Outcomes			
1	2 theoretical	A ,B, and C	Methods for 1st order	ppt, pdf, &	Quiz, Discussion &
			Ordinary Differential Equations, Euler method	Video lectures	Exam
2	2 theoretical	A ,B, and C	Improved Euler method, Backward Euler method	ppt, pdf, &	Quiz , Discussion &
				Video lectures	Exam
3	2 theoretical	A ,B, and C	Heun's method: trapezoidal method,	ppt, pdf, &	Quiz , Discussion & Exam
				Video lectures	
4	2 theoretical	A ,B, and C	Runge-Kutta method	ppt, pdf, &	Quiz , Discussion & Exam
				Video lectures	
5	2 theoretical	A ,B, and C	Adams-Bashforth methods, Adams-Moulton methods.	ppt, pdf, &	Quiz , Discussion & Exam
				Video lectures	
6	2 theoretical	A ,B, and C	Linear & Quadratic interpolation	ppt, pdf, &	Quiz , Discussion & Exam
			-	Video lectures	
7	2 theoretical	A ,B, and C	N- interpolation degree	ppt, pdf, &	Quiz , Discussion & Exam
				Video lectures	
8	2 theoretical	A ,B, and C	interpolation, Interpolation by Newton polynomial	ppt, pdf, &	Quiz , Discussion & Exam
				Video lectures	
9	2 theoretical	A ,B, and C	approximation by Chebyshev polynomial	ppt, pdf, &	Quiz , Discussion & Exam
				Video lectures	
10	2 theoretical	A ,B, and C	interpolation by Cubic spline	ppt, pdf, &	Quiz , Discussion & Exam
			_	Video lectures	
11	2 theoretical	A ,B, and C	Hermite interpolating polynomial.	ppt, pdf, &	Quiz , Discussion & Exam
			1 5	Video lectures	Exam
12	2 theoretical	A ,B, and C	Straight line fit (a	ppt, pdf, &	Quiz, Discussion &
			polynomial function of first degree),	Video lectures	Exam
13	2 theoretical	A ,B, and C	Polynomial curve fit(a	ppt, pdf, &	Quiz, Discussion &
			polynomial function of higher degree),	Video lectures	Exam
14	2 theoretical	A ,B, and C	Exponential curve fit and other functions.	ppt, pdf, &	Quiz, Discussion &
			Finite differences	Video lectures	Exam
15	2 theoretical	A ,B, and C	=.	ppt, pdf, &	Quiz, Discussion &
				Video lectures	Exam

				od	
1;2; 3;4; 5	20	 We start with a basic and thorough introduction to eigenvalue problems in week 2 and explain with several simple matrices. This is followed by a section devoted entirely. We show you these diverse examples to train your skills in modeling and solving eigenvalue problems. Eigenvalue problems for real symmetric, skewsymmetric, and orthogonal matrices are discussed in week 3, and their complex counterparts (which are important in modern physics) in week 3. In week 4 we show how by diagonalizing a matrix, we obtain its eigenvalues. The z-transform, which extends the DTFT to the analysis of discrete-time systems. algebraic 	Complex Variable Theory Function: of complex variable, complex differentiation, Cauchy- Riemann equations, analytic function and its properties, Elementary complex functions; powers, exponential function, trigonometry and hyperbolic function, logarithm, and general powers. Mapping of elementary complex functions, Cauchy's integral theorem, Cauchy's integral formula, Cauchy integration in the complex plane, derivatives of an analytic functions. Infinite series for functions of complex variable; Taylor series, Laurent series, the residue multiply connected regions.	Attend ance	Quizze LO #(1&2) (5&6), (9&10) and (12&13)s

10;1 1;12	12	complicated, and their solutions may be nonelementary functions. Legendre's, Bessel's, and the hypergeometric equations are important ODEs of this kind. Since these ODEs and their solutions, the Legendre polynomials, Bessel functions, and	Partial Differentiation : Function of two or more variables. Partial derivatives. Directional derivative. Gradient, divergence and curl. Tangent plane and normal line. Maxima, minima & saddle point.	Attend ance	
13;1 4;15	12	hypergeometric functions play an important role in engineering modeling, we shall consider the two standard methods for solving such ODEs. The transition from "real calculus" to "complex calculus" to "complex calculus" starts with a discussion of complex numbers and their geometric representation in the complex plane. We then progress to analytic functions in week 12. We desire functions to be analytic because these are the "useful functions" in the sense that they are differentiable in some domain and operations of complex analysis can be applied to them. The most important equations are therefore the Cauchy–Riemann equations in week 13 because they allow a test of the analyticity of such functions	Ordinary differential Equations: First order: variables separable, homogeneous, linear – Bernoulli and exact. Second order: homogeneous and non-homogeneous. Higher order differential equations.	Attend ance
